Our Products & Services:

- * *Coconut fruits*
- * *Dwarf Coconut Seedlings*
- * *Livestock*
- * *Poultry*
- * *Agricultural consultancy*

SAHMEN FARMS

VARIETIES OF DWARF COCONUT

- SRI-LANKA (GREEN, YELLOW, ORANGE, B.)
- MALAYAN (GREEN, YELLOW, ORANGE, B.)
- EQUITORIAL (GREEN, YELLOW, ORANGE)
- OTHERS WORLD WIDE

SAHMEN FARMS

WHY COCONUT

- WITHSTANDS VARIED WEATHER CONDITIONS
- TREE OF LIFE/HEALTHY
- LESS LABOUR INTENSIVE
- LUCRATIVE
- HIGH DEMAND
- LONG LIFE SPAN
- NON PERISHABLE
- VARIED USES(FROM TREE TO FRUIT)

WHY DWARF COCONUT

- FRUITS EARLY(18-36MONTHS)
- VERY SHORT(EASE OF HARVESTING)
- HIGHLY DISEASE/DROUGHT RESISTANT
- HIGH YIELD PER MONTH
- NUT AND JUICE HIGHLY DELICIOUS
- DEMAND VERY HIGH
- SELF POLLINATOR
- LESS SPACE REQUIRED

SAHMEN FARMS

WHY GET IT FROM US

- REGISTERED ENTITY WITH TRACK RECORD
- CERTIFIED(PPRSD, GEPA.)
- QUALITY WITH ALL CONTROLS CHECKED
- FREE AFTER SALES CONSULTANCY SERVICE
- COMPETITIVE PRICING
- OURS ARE HIGHLY DISEASE RESISTANT
- OURS ARE HIGHLY DROUGHT RESISTANT

SAHMEN FARMS

Item(s)	Quantity	Unit cost	Total(Cedis)
Clearing of the land	10	200	2000
Cost of spraying	40	20	800
Cost of pegging			1000
Cost of planting			1000
Cost of seedling	850	7	5950
Tranportation			1000
Miscleaneous			2000
Total			13,750

- **EXPECTATIONS AFTER 3 YEARS(RETURNS)**
- Dwarf /hybrid coconut gives an average monthly yield of **10 fruits per tree**
- Farm Price of fruits is mostly dependent on the location of the farm
- Site locations closer to regional capitals attracts higher farm prices(**0.8 - 1 cedi per fruit**)
- 850 coconut trees will produce **8500**(850x10)
Fruits per month(this number will increase with time)
- 8500x0.8cedi will give us **6800 monthly** revenue
- Yearly revenue : 6800x12=**81,600**
- Buyer/consumer pays for harvesting expenses

SAHMEN FARMS

GUIDELINES FOR FARMING

- CLEAR THE WEEDS ON THE LAND
- BURN THEM
- PEGGING(20FT MINIMUM DEPENDING ON THE TYPE OF VARIETY AS WELL AS THE NATURE OF THE SOIL)
- DIG HOLES (PER THE TYPE OF PLANTING METHOD)
- PLANT SEEDLINGS(EITHER THE NORMAL /COMPREHENSIVE WAY)

SAHMEN FARMS

DO'S

- AVOID WEED
- FERTILISE/MANURE REGULARLY(TWICE PER ANUM)
- CHECK PEST AND THEIR SIGNS
- IRRIGATE IF POSSIBLE
- CHECKING SPACING(20FT MINIMUM)
- SANDY LOAMY/LOAMY/SANDY/LATERITE SOIL
BEST OPTION

SAHMEN FARMS

DONT'S

- AVOID OVERCROWDING
- NEVER CUT FONDS/BRANCHES
- DON'T BURRY STALK OF THE PLANT DURING PLANTING
- DON'T LEAVE OLD BUNCHES IN TREE
- AVOID TREES THAT OVERSHADOW/COMPETE WITH THE COCONUT (BAMBOO...)
- AVOID STUMPS IN YOUR FARM(BREEDING SITES FOR RHINOCERUS BEETLE)
- KEEPING PROBLEMS TO YOURSELF

PEST(Rhinoceros beetle)

SAHMEN FARMS

PLANTING METHODS

- 2 TYPES

A. CONVENTIONAL METHOD

B. COMPREHENSIVE METHOD

COMPREHENSIVE METHOD

- Dig 2*2ft deep hole
- Arrange one layer of dried coconut husk in the hole with the concave side facing up
- Fill the hole with loose sand up to about 0.5ft
- Followed by filling the hole with 0.5ft of organic manure
- And then fill the final layer with dugged out soil of about 0.5ft
- Dip the coconut seed/pod in chlorpyforos/dusban dissolved in water (5ml/litre) for about 3mins.
- Dig the center of the hole per the size of the seed/pod and then plant the seedling
- Please make sure the collar region/stalk is just at the level of the soil

- Please compact the soil around the stalk of the seedling after making sure it is erect/upright.
- Irrigate slowly from top of the plant with 30cm bucket for the plant to settle
- Please continue irrigation after every 3 days if there is no rainfall.
- Apply NPK and Ammonia after 3months of planting (50g each)
- Spray leaves and stalk with prophylactic chorpyforos after 4months of planting and then twice in every year
- For good results, fertilizer application should be repeated twice in every year in increasing dosages of 50g with a total maximum dosage of 400g
- **NB: fertilization and chemigation are recommended to be done in the afternoons during the raining season period**
